

Sequestration 2014: Undermining the Response to HIV/AIDS in the U.S.

amfAR and NMAC have estimated the potential human impact of budget sequestration in Fiscal Year 2014 on domestic HIV/AIDS programming. These estimates are based on the latest publicly available data on budget allocations and unit costs. Applying a 7.3% cut to these programs through sequestration would have serious impact on people living with HIV/AIDS, particularly people of color, who are disproportionately affected by the epidemic.

HIV/AIDS Research at NIH

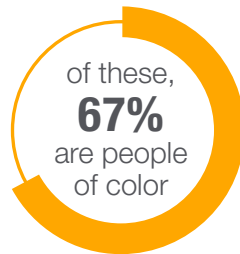

FEWER GRANTS FUNDED

\$229 MILLION
funding cut

Housing Opportunities for People with AIDS (HOPWA)

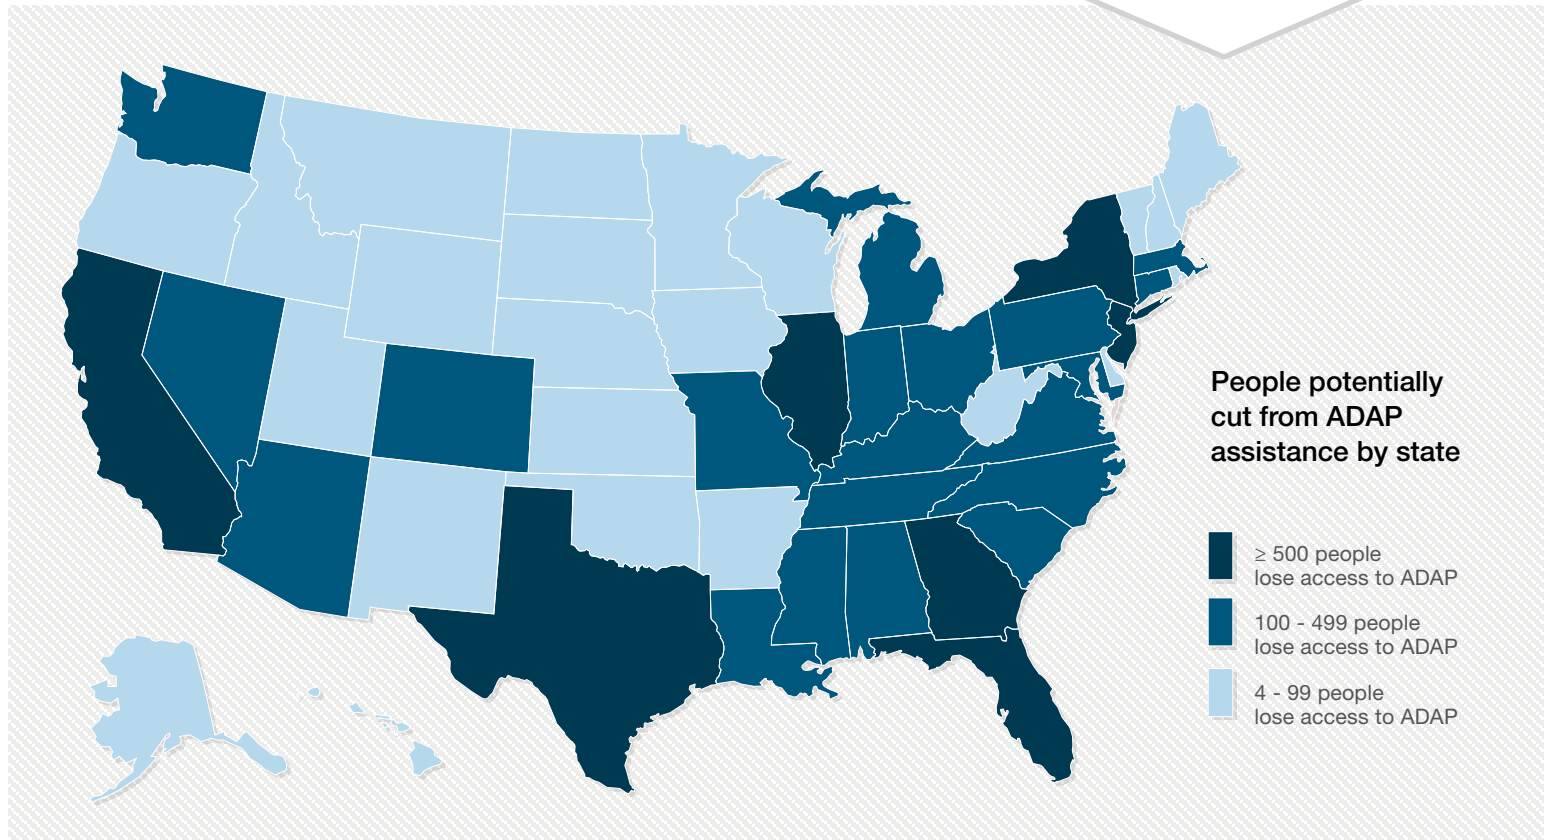

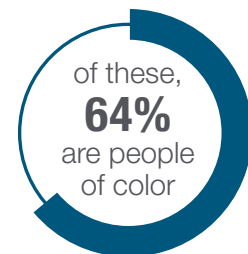

FEWER HOUSEHOLDS RECEIVING HOUSING ASSISTANCE

AIDS Drug Assistance Program (ADAP)

FEWER PEOPLE FOR WHOM FEDERAL ADAP FUNDING IS AVAILABLE

The figures above are estimates of the possible impact of sequestration cuts. Policy makers have a range of options in applying funding cuts, but if the programs above are protected, deeper cuts will be needed elsewhere.
